**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 28 and 30 are rejected under 35 U.S.C. 102(b) as being anticipated by Sugiyama et al. (US 2002/0071027 A1, hereinafter “Sugiyama”).

Sugiyama discloses a method of performing speaker switching by a multi-point conference device (MCU 10) connected to a plurality of terminals (meeting terminals 100), comprising the steps of:

transmitting an intra frame transmission request to a terminal when said multi-point conference detects a speaker (video data selection block 11 switches the output video data to the video of the selected speaker; paragraphs 62-64, 72-73); and

the terminal receiving an intra frame transmission request from said multi-point conference device and transmitting an intra frame to said multi-point conference device (the video data selection block 11 transmitting the switched video data including a single intra-frame data; paragraph 81).

***Allowable Subject Matter***

3. Claims 19-27, 31-37 are allowed.

Art Unit: 2614

4. Claim 29 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Response to Arguments***

5. Applicant's arguments filed March 17, 2009 have been fully considered but they are not persuasive. Applicant argues that "[n]either the Sugiyama nor Firestone references disclose, teach or even suggest the decoding and re-encoding to provide an intra frame at the time of speaker switching." However, Claims 28 and 30 do not recite such decoding and re-encoding to provide an intra frame.
